The Academy of Social Sciences, UK, has conferred the award of Academician on Prof. Adrian Bailey, Dean of Social Sciences, in recognition of his outstanding achievement in social sciences research and his impact on advancing social sciences. Currently, the Academy has around 87,000 memberships from its 46 learned societies and only just over 1% of the members are Academicians who are entitled to use the letters “AcSoc” after their name. Prof. Bailey is one of the two scholars in Hong Kong on whom the honour was bestowed.

HKBU Establishes Hong Kong's Largest Nombarombic Hypoxic Chamber

HKBU recently set up Hong Kong’s largest Nombarombic Hypoxic Chamber in Dr. Stephen Hui Research Centre for Physical Recreation and Wellness (CPRW) to further promote the development of hypoxia-related research. On 28 January 2014, Prof. Frank Lui, Associate Vice-President and Director of CPRW and his team released the findings of a research project entitled “The effects of maximal intermittent exercises in normoxia and hypoxia environments on the release of cardiac biomarkers and the potential mechanism” and introduced the current and upcoming research projects and the future consultancy services of the Chamber to the general public.

The Academy of Social Sciences, UK, has conferred the award of Academician on Prof. Adrian Bailey, Dean of Social Sciences, in recognition of his outstanding achievement in social sciences research and his impact on advancing social sciences. Currently, the Academy has around 87,000 memberships from its 46 elected societies and awards over 1% of the members. Professor Bailey is one of the scholars in Hong Kong on whom the honour was bestowed.

HKBU Scholar Develops New Nanoshell-based Composite for Hepatic Tumour Chemoembolisation Surgery and Magnetic Resonance Imaging

Dr. Ken Leung, Assistant Professor of the Department of Chemical and Biomolecular Engineering, together with experts from the radiology department of the Chinese University of Hong Kong and the Central South University of China, developed a novel self-assembled composite which enables intra-tumoural embolisation of liver tumour blood vessels followed by slow and sustained drug release of anticancer drug which offers a therapeutic advantage. The results can be applied to increase the efficacy of transcatheter hepatic arterial chemoembolisation and magnetic resonance imaging (TACE).

Dr. Ken Leung
